Integrated vision for Development of Mozambique's Transmission Backbone

- The backbone is a critical pillar for the country's economic growth, energy security, and regional integration. As Mozambique continues to develop its vast energy resources particularly hydropower, natural gas, and emerging renewable energy sources the need for a robust, reliable, and integrated transmission network has become increasingly important.
- An integrated vision for the development of Mozambique's transmission backbone focuses on strengthening national connectivity, enabling efficient power evacuation from generation sites, expanding access to electricity, and supporting regional power trade.
- The integrated vision emphasizes resilience, digitalization, and modern grid management. Investments in smart grid technologies, modern control systems, and real-time monitoring will improve the operational efficiency of the transmission network.
- Strengthen National Grid Connectivity, expand high-voltage transmission corridors will Improve North–South power transfer and reduce system losses
- Integrate New Generation, enable connection of hydropower, gas, solar, and wind projects, ensure efficient evacuation of power from generation sites
- Support Regional Power Trade, enhance cross-border interconnections and Increase participation in regional electricity markets
- Enable Inclusive Growth, strengthen backbone to support expansion of distribution networks and Facilitate electrification, industrial development, and social services
